Customized + Standard Power Devices  
SiC-Modules and SiC-Rectifiers

## Shortform Catalogue vers. 34/05

- Customized Products not included
- Datasheets on our website

**Quality**  
first...  
since 1985

**Power Semiconductors**  
Made in Germany & Made in India

# **Founder of POWERSEM**

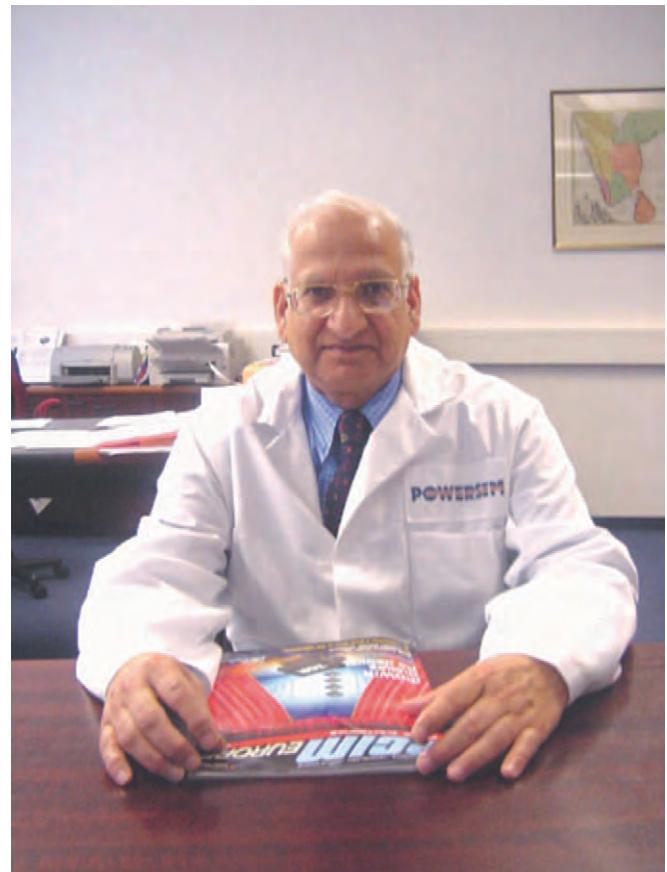

## **a motor in progress of semiconductor technology and semiconductor devices**

"**Madan** had realized his dreams building up a company in power electronics in Schwabach/Germany.

His spirit and visions are on continuity by his daughter Kavita and his son Ashok."

**Mr. Madan Mohan Chadda** (1939-2002) was born in Amritsar, India. He was a renowned physicist and scientist - B. Sc. (Hons.); M. Sc. (Math.); M. Sc. (Phys.) -, educated in India and England, and worked for many established corporations in India, England, Switzerland and Germany until he settled down with his family in Germany. For his work as a physicist, **Mr. Chadda** obtained over 40 patents in his lifetime.

**Mr. Chadda** founded **POWERSEM GmbH** in Germany in 1985. The pinnacle of his remarkable career was the opening of a brand new, state-of-the art facility in 2000 utilizing clean and efficient hydrogen power. **POWERSEM** designs, develops and manufactures multiple chip semiconductor modules. Today, **POWERSEM** is considered a world leader in designing and manufacturing isolated base packaged modules for standard, fast single, three phase, half and full controlled power semiconductor modules in a compact package. **POWERSEM** has offices and representations throughout the entire world, with a new manufacturing unit founded by his son Ashok in Bangalore, India.

**Mr. Chadda** was a very well respected CEO and President of **POWERSEM** and business leader not only in the German industrial and political landscape, but, internationally recognized, especially, in Germany, India, United Kingdom and Switzerland where he was engaged in numerous projects and strategic alliances with large companies. He was a philanthropist, always believing in giving back to his community and country by constantly funding charitable projects.

**Mr. Madan Mohan Chadda** was truly a devoted husband and father, whose relentless energy and passion for power electronics helped him realize his dreams in building up his global company.

**POWERSEM GmbH** is now managed and led in the spirit of Mr. Chadda by his daughter Kavita and his son Ashok.

In 2005 **POWERSEM GmbH**, Germany, has formed its Subsidiary „**POWERSEM Semiconductors Pvt. Ltd.**“ in Bangalore, India. In spirit of **Madan Mohan Chadda**, **POWERSEM Germany** and **POWERSEM India** wishes to serve its worldwide customers with newest innovations and latest technologies. **POWERSEM** hopes to be an essential help for the industrial and economical growth of the Indian Power Semiconductor Manufacturing Market.

## Symbols and Terms

$di/dt$	Rate of change of current
$(dv/dt)_c$	Critical rate of rise of forward voltage
$E_{ts}$	Total switching energy
$f$	Frequency range
$I_c$	Collector current
$I_{cpuls}$	Pulsed collector current
$I_{cm}$	Maximum collector current
$I^{2t}$	Fusing current
$I_{DAV}$	Average DC-output current
$I_{DRM}$	Off-state leakage current
$I_{D(cont)}$	Continuous drain current
$I_F$	Forward current
$I_{FAV}$	Maximum average forward current
$I_{FRMS}$	RMS forward current
$I_{FSM}$	Peak one cycle surge forward current
$I_H$	Holding current
$I_R$	Maximum reverse current
$I_{RMS}$	RMS current
$I_{TAV}$	Maximum average on-state current
$I_{TRMS}$	RMS forward current
$I_{FSM}, I_{TSM}$	Maximum surge forward current
$P_D$	Power dissipation
$P_N$	Mains power
$r_T$	Slope resistance (for power loss calculations)
$R_{DS(on)}$	Static drain source on resistance
$R_{thJS}$	Thermal resistance junction to heatsink
$R_{thCH}$	Thermal resistance case to heatsink
$R_{thJA}$	Thermal resistance junction to ambient
$R_{thJC}$	Thermal resistance junction to case
$R_{thJH}$	Thermal resistance junction to heatsink
$T_A$	Ambient temperature or temperature of the cooling medium
$T_C$	Case temperature
$T_J, T_{VJ}$	Junction temperature
$T_O$	Operating temperature
$T_{VJM}$	Maximum junction temperature
$t_{d(off)}$	Turn-off delay time
$t_{d(on)}$	Turn-on delay time
$t_f$	Current fall time
$t_q$	Turn-off time
$t_r$	Current rise time
$t_{rr}$	Reverse recovery time
$V_{CES}$	Collector-emitter voltage (IGBT)
$V_{CE(sat)}$	Collector-emitter saturation voltage with IB and IC specified
$V_{DRM}$	Maximum repetitive off-state voltage
$V_{DSS}$	Drain source breakdown voltage
$V_{FM}$	Forward voltage drop
$V_{VRMS}$	Maximum allowed AC-voltage (RMS-value)
$V_{RRM}$	Maximum repetitive reverse voltage
$V_{TM}$	Zero turn-on voltage
$V_{TO}$	Threshold voltage (for power loss calculations only)

# **Mounting Instructions**

## **Modules and Rectifier Bridges:**

Contact surfaces must be free of dirt and be undamaged. The heat sink contact surface must have a flatness of < 0.03 mm (< 1.2 mil) and a levelling depth of <0.02 mm (< 0.8 mil). Apply a thin layer of heat transfer paste evenly to the module's base plate just sufficient to cover the entire base plate. It is recommended to apply DC 340 (Dow Corning) or Berulub FZ 1E3 (Bechem, silicone free), or equivalent by using a sponge/soft rubber roller.

The minimum thickness of grease is best controlled by removing some modules from the heat sink after mounting and inspecting the entire area of the metal base plate. The module bottom surface must have wetted completely with thermal grease.

The minimum required depth of thread in aluminium heatsinks is 12 mm and 10 mm in copper heat sink. All mounting holes must be free from burrs. First tighten all mounting and terminal screws stepwise. Then use a torque wrench to apply the tightening torques given on the data sheet. Make sure that the screws fit easily into the threads. Otherwise the total tightening torque will be reached without the necessary contact being obtained.

Do not pull or push on the terminals when making the electrical connections. Make sure that no permanent tensile force is exerted on the terminals.

## **Modules and Rectifier Bridges supplied with solderable leads:**

The maximum allowable soldering time is 10 seconds. Do not exert any axial force on the leads. Make sure that the distance between the bending axis and package is > 5 mm, with the bending radius > 2 mm. Avoid repeated bending. The distance between solder leads and package should be > 10 mm.

## **Note about Modules with Copper-Baseplates:**

Due to the manufacturing process there could be variations in the flatness of the baseplates. But the thermal resistance will always be within the limits of the datasheets.

The flatness is controlled in several steps during the manufacturing process.

Make sure that the given torque is not exceeded. Besides a thermal conductance paste (e.g. DC 340, Dow Corning) has to be used with a layer thickness of 50µm -100µm.

## **Important note:**

The terminal connection torques given in the data sheets are maximum values, depending on the applied connection.

Using current bars, torques up to 5 Nm can be necessary to achieve a tight and reliable connection.

For open cable lugs, a torque of 2.5 Nm is already sufficient to realize a good electrical connection. Higher terminal connection torques could damage the lug itself as well as the module terminals and the housing. In every case, one should pay attention, that the clamping parts don't move, while the terminal screws are fastened. Twisting of the terminals would effect mechanical stresses on the terminals themselves and on the housing. Both could reduce lifetime and reliability of the module.

**For each module you can download detailed datasheets from our website or send us your request to [info@powersem.com](mailto:info@powersem.com)**

if you should need more help and information  
concerning mounting instructions  
do not hesitate to contact:

# Preform based Diffusion Soldering Technology for SiC/GaN Devices for Usage at High Temperatures

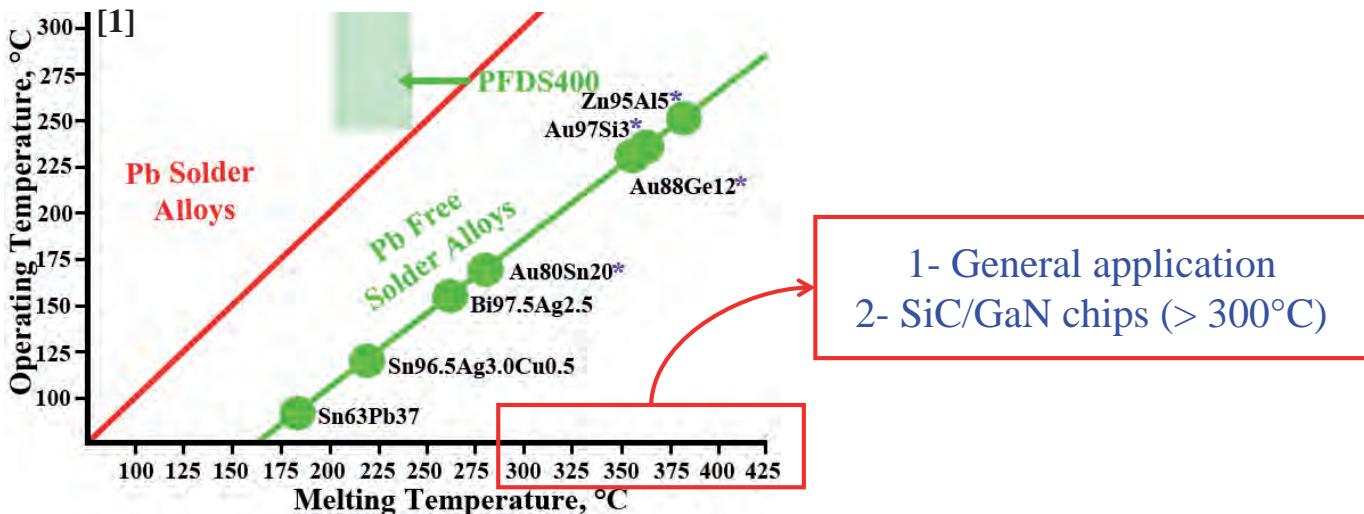

## Diffusion Soldering:

Growth of intermetallic phases in the joint during the isothermal solidification

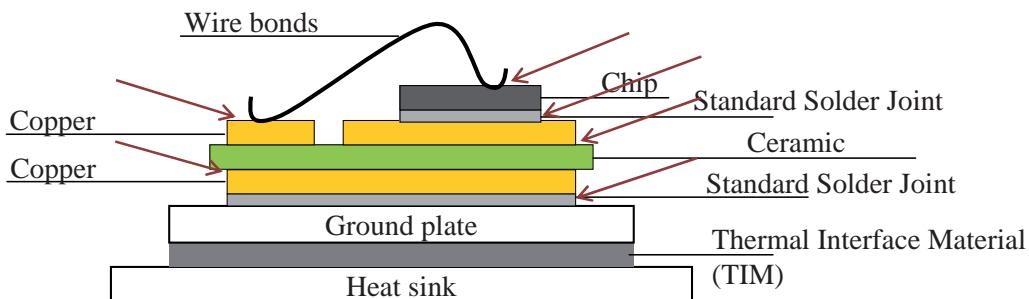

Why “Diffusion Soldering” for high temperature electronic applications?

## Why “Diffusion Soldering” for high temperature electronic applications?

[1]: M. Knoerr et al., ISBN 978-3-8007-3212-8, VDE Verlag, Berlin Offenbach

### Die attach and DBC attach –

- Solder fatigue, fractures
- Voids and CTE mismatch, delamination
- Loss of adhesion, thermal runaway, open circuit

### Substrate –

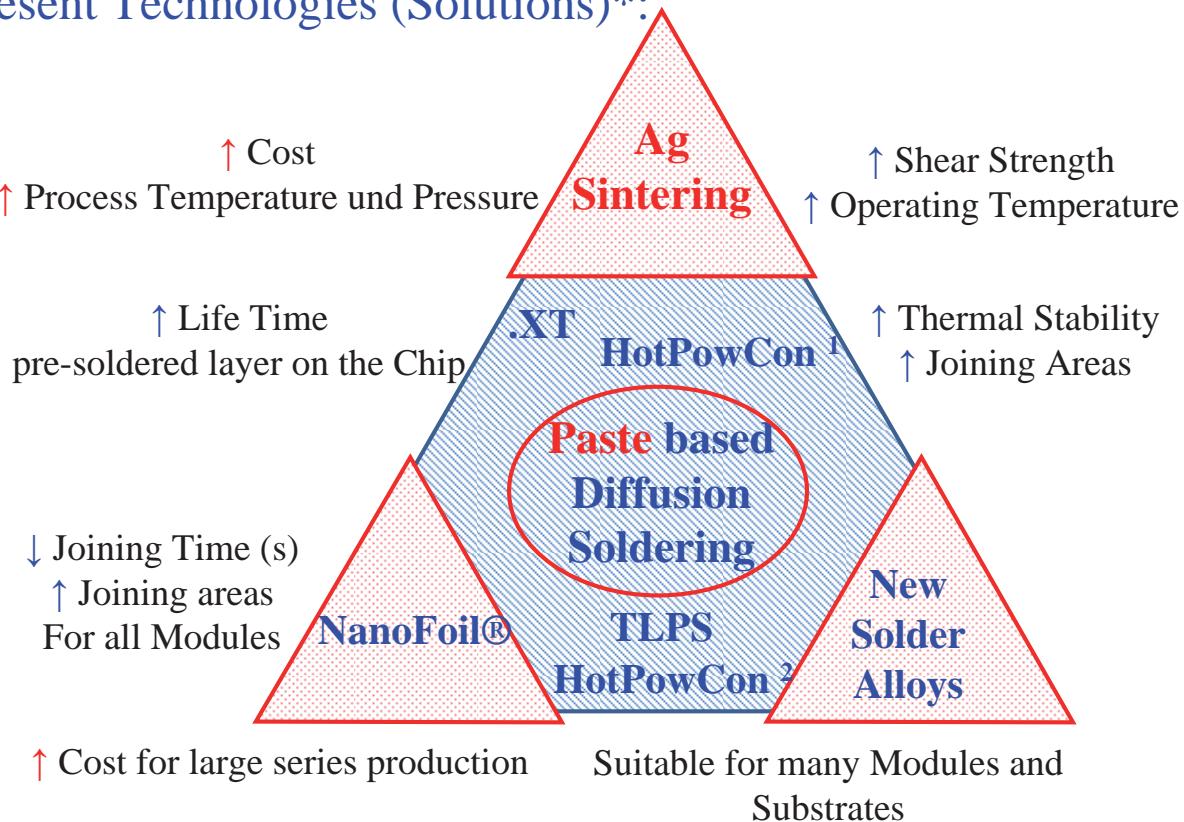

- Copper delamination
- Substrate fracture and fatigue
- Ceramic cracking

### Wire bonds –

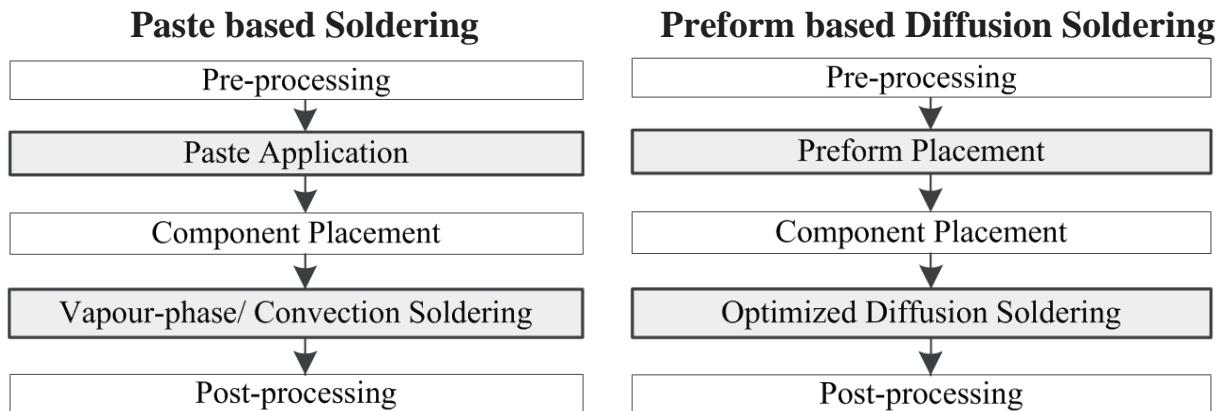

- Wire lift-off and flexure fatigue
- Cracking of semiconductor die

- Sn-based solders reaching load limits due to thermo-mechanical fatigue
- Sn-based standard solder joints unreliable as operating temperatures reach 200°C in power electronics
- Need for reliable power modules for operating temperatures >200°C
- Compatible with new generation materials (SiC, GaN) and already available manufacturing equipment
- Competitive and cost-effective processes compared to other die-attach technologies

## Present Technologies (Solutions)\*:

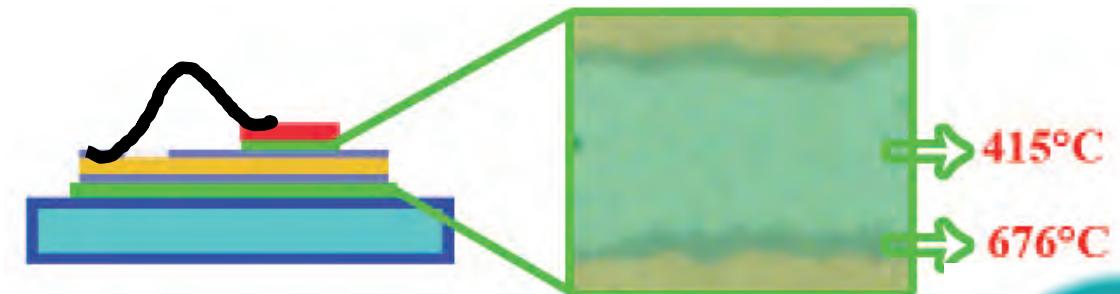

\*: R. Kohl, et al., and T. Herberholz, et al., DVS 310, 2015

- ✓ Elimination of paste printers and laborious handling of solder pastes
  - ✓ Elimination of hardware based changes and installations (e.g. stencils/ screens)
  - ✓ Flexible handling of preforms and integration possibilities
- Immediate cost reduction with higher Product Reliability
- Customized prototyping and faster product designs with higher flexibility

## PFDS400:

**Preforms** based **Diffusion Soldering** technology made by Pfarr for usage at **high temperatures** is your solution

Initials experiments → metallized chips/or substrates with Cu and Ni

[www.pfarr.de](http://www.pfarr.de)

Pfarr Stanztechnik GmbH:

- Founded in 1982
- 100 employees
- Precision preforms stamped parts for electronic and microelectronic applications
- High purity solder and braze alloys
- Landal-Seal®

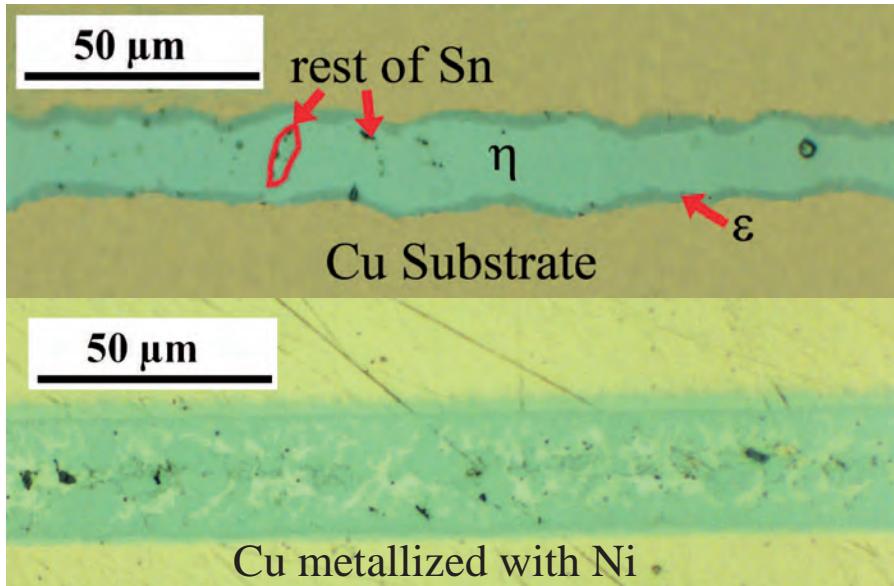

## PFDS400:

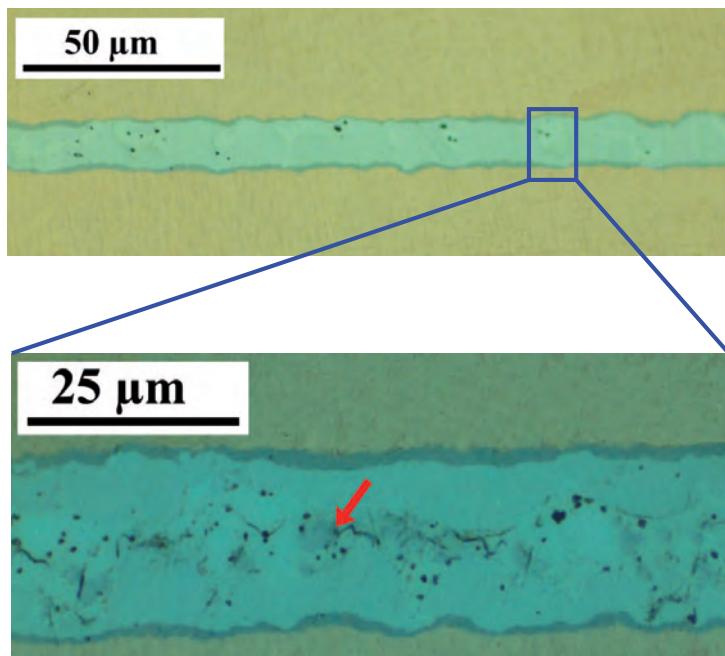

- ✓ Different choices of solder alloys
- ✓ Various sizes and thickness
- ✓ Suitable for different metalized substrates/Chips

### Initial Results

Property	$\text{Cu}_6\text{Sn}_5(\eta)$	$\text{Cu}_3\text{Sn}(\varepsilon)$
E-Modul	86 GPa	108 GPa
Melting point	415°C	676°C

## PFDS400:

- ✓ Conventional vacuum soldering process
- ✓ Melting points < 250°C
- ✓ Operating temperatures up to 400°C
- ✓ Temperatures profiles < 300°C
- ✓ Time of temperature profiles ≤ 30 min

## Present Technologies (Solutions):

## Featured Products

## Eco-227®

- ✓ Same footprint as SOT 227
- ✓ Halogen-Free Housings
- ✓ Best Thermal Cycling with SCT instead of DBC
- ✓ More flexible customized and optimized circuits possible than with SOT 227
- ✓ ***Ideal for SiC-, GaN- Modules***

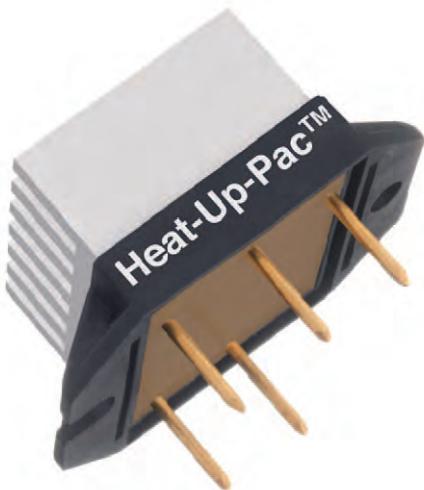

→ ***Highest efficiency with preform based diffusion soldering (PFDS400)***

## iSi-Flow®

- ✓ 9mm, 12mm and 17mm Heights available
- ✓ Halogen-Free Housings
- ✓ Best Thermal Cycling with SCT instead of DBC
- ✓ Screwable from TOP or DOWN
- ✓ Available with Solder Pins (gold-plated) or PRESS-FIT-PINS
- ✓ ***Ideal for SiC-, GaN- Modules***

→ ***Highest efficiency with preform based diffusion soldering (PFDS400)***

## Heat-Up-Pack™

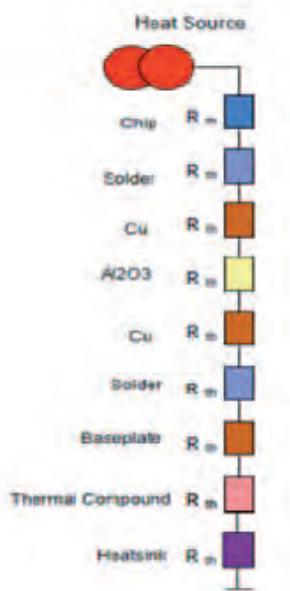

- ✓ Best Thermal Cycling with CoH™ instead of DBC and Aluminium Heatsink

- ✓ Available with Solder Pins (gold-plated) or PRESS-FIT-PINS

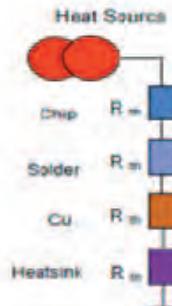

- ✓ *Ideal for SiC-, GaN- Modules*

*Highest efficiency with preform based diffusion soldering (PFDS400)*

**ACTUAL R<sub>th</sub>-STANDARD**

**PFDS400**

Your **NEW R<sub>th</sub>-STANDARD**

## High-Performance ECO-PRESS-FIT-Modules for Si- and SiC-Layouts

Other configurations and pin layout upon request  
kundenspezifische Konfiguration  
und Pin Layout möglich

9mm Gehäuse-Höhe, 9mm Housing Height  
17mm Gehäuse-Höhe, 17mm Housing-Height

### Flexible Einpresstechnik EloPin®

- ✓ Niedrige Einpresskräfte
- ✓ Hohe Haltekräfte
- ✓ Niedriger Übergangswiderstand
- ✓ Hohe Schwingungs - und Schock beständigkeit
- ✓ Einsatztemperatur von - 40°C bis +150°C
- ✓ Geringste Beanspruchung der Durchkontaktierungen und PCB-Layer
- ✓ Keine Zinnspanbildung beim Einpressvorgang
- ✓ RoHS-konform

### Elastic Press-Fit EloPin®

- ✓ Low press-in force
- ✓ High push-out force
- ✓ Low electrical resistance
- ✓ High vibration and shock resistance
- ✓ Operating temperature - 40°C to +150°C
- ✓ Low stress on through plated holes and PCB Layers
- ✓ No tin chips during press-in process
- ✓ RoHS-compliant

Halogen-Free Housing

## RECTIFIER BRIDGES

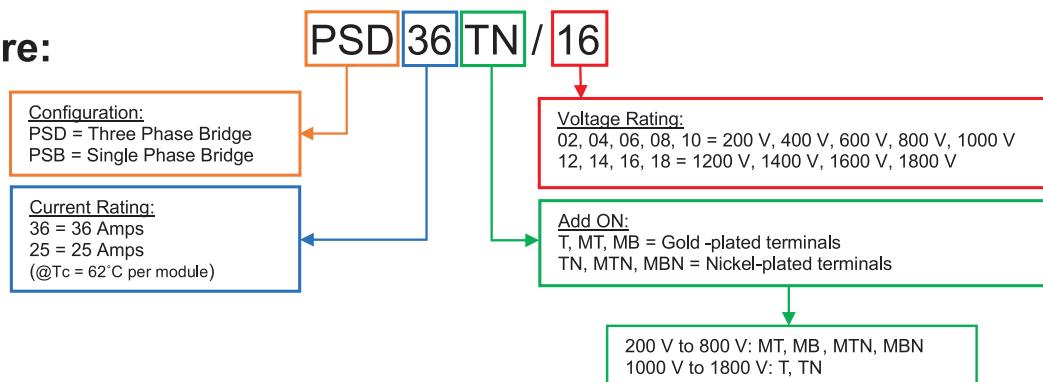

Current	Voltage	Part Number	Available Configurations	Figure
25 A	200 V – 1000 V	PSB 25MB & PSD 25MT PSB 25MBN & PSD 25MTN	 	
	1200 V – 2200 V	PSB 25T & PSD 25T PSB 25TN & PSD 25TN		
36 A	200 V – 1000 V	PSB 36MB & PSD 36MT PSB 36MBN & PSD 36MTN	 	
	1200 V – 2200 V	PSB 36T & PSD 36T PSB 36TN & PSD 36TN		

### Highlights:

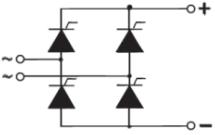

- > Single phase and three phase uncontrolled bridges
- > Compact package, easy to mount with one screw
- > Connectors suitable for easy PCB mounting
- > Gold plated or nickel plated terminals
- > UL certified, RoHS and REACH conform

### Nomenclature:

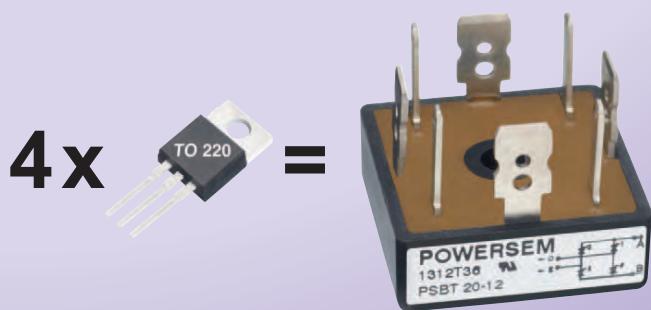

## FULL CONTROLLED RECTIFIER BRIDGES

Current	Voltage	Part Number	Available Configurations	Figure
20 A	200 V – 1000 V	PSBT 20		

### Highlights:

- > Single phase fully controlled bridge
- > Replaces 4 discrete thyristors
- > Reduced costs and assembly times
- > Compact package, easy to mount with one screw
- > Connectors suitable for easy PCB mounting
- > Nickel plated terminals
- > UL certified, RoHS and REACH conform

## Customized Si/SiC-ECO-Diode-Modules\* for mounting on PCBs with solder pins or press pins and optimized module heights (pin heights on request)

## Power modules with SCT\*\* or DCB/DBC

Differences SCT / DCB:

Method of production	SCT	DCB
Min. gapwidth	100µ	High temperature bonding process 0,4 mm (@ 200µ CU) 0,5mm (@ 300µ CU)
Number of thermal cycles (-55°/150°C) (63,3%)	> 1000 (depending on layout)	~ 150 (depending on layout)
Free of partial discharge	yes	no (special treatment required)
Specific. Resistance	0,0167 Ohm x mm <sup>2</sup> /m	0,0297 Ohm x mm <sup>2</sup> /m
Min. thickness of metallization	17µm	127µm
Multilayer	Up to 4 layers	No
Printed resistors	Yes	No

Made in Germany

## TRACTION-PAC™: Diode Modules for high-speed-rotating applications

### Three Phase Rectifier Bridge PSTD 82

#### PSTD 82

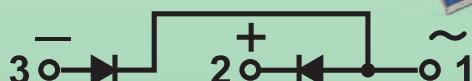

$V_{RRM}$ :	600 - 1800 V
$I_{DAV}$ :	88 A @ $T_c = 110^\circ C$
$I_{FSM}$ :	750 A (10 ms, 45° C)
$V_{TO}$ :	0,8 V
$r_T$ :	5mΩ
$T_{VJM}$ :	150° C
$R_{thJC}$ :	1,10 K/W
$R_{thJH}$ :	1,52 K/W

### Diode Module PSTKD 82

#### PSTKD 82

$V_{RRM}$ :	600 - 1800 V
$I_{DAV}$ :	88 A @ $T_c = 110^\circ C$
$I_{FSM}$ :	1700 A (10 ms, 45° C)
$V_{TO}$ :	0,8 V
$r_T$ :	2,7 mΩ
$T_{VJM}$ :	150° C
$R_{thJC}$ :	0,35 K/W
$R_{thJH}$ :	0,55 K/W

## ECO-FRIENDLY THYRISTOR MODULES FOR PCB MOUNTING

$V_{RRM}$ :	600 - 1800 V
$I_{TAVM}$ :	116 A @ $T_c = 85^\circ C$
$I_{FSM}$ :	2250 A ( $45^\circ C$ , 10 msec)
$V_{TO}$ :	0,8 V
$r_T$ :	2,4 mΩ
$T_{VJM}$ :	125° C
$R_{thJC}$ :	0,26 K/W
$R_{thJH}$ :	0,46 K/W

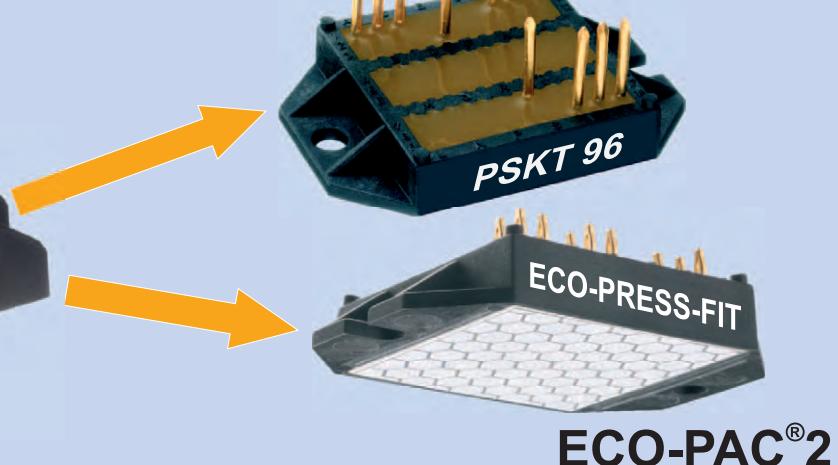

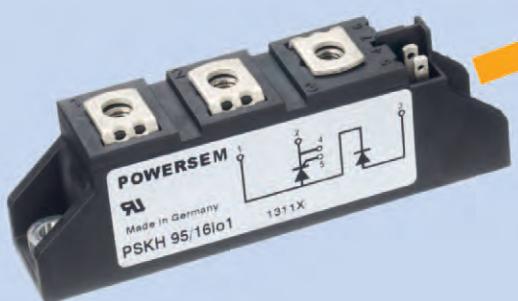

PSKT 95 (TO 240)  
PSKT 96 (ECO-PAC®2)

→ REDUCE COSTS! ← ← ← ←

ECO-PAC®- Devices are compact (9mm Module Height) and ideal for mounting on PCB, with Solder Pins or Press Pins, on Request with Phase Change Compound

# ZERTIFIKAT

Hiermit wird bescheinigt, dass

## **POWERSEM Gesellschaft für Halbleiterbauelemente und Elektronik mbH**

Walpersdorferstraße 53  
91126 Schwabach  
Deutschland

ein **Qualitätsmanagementsystem** eingeführt hat und anwendet.

### Geltungsbereich:

Entwicklung, Produktion und Vertrieb von Leistungselektronik-Modulen wie Dioden-Modulen, Thyristor-Modulen, IGBT-Modulen, MOSFET-Modulen, SiC-Modulen und Halbleiter-Relais.  
Entwicklung, Produktion und Vertrieb von Leistungselektronik-Komponenten in diskreter und umspritzter Bauweise.

Durch ein Audit, dokumentiert in einem Bericht, wurde der Nachweis erbracht,  
dass das Managementsystem die Forderungen des folgenden Regelwerks erfüllt:

## **ISO 9001 : 2015**

Zertifikat-Registrier-Nr. 209348 QM15

Gültig ab 2018-07-18

Gültig bis 2021-07-17

Zertifizierungsdatum 2018-07-18

**DQS GmbH**

Stefan Heinloth  
Geschäftsführer

# CERTIFICATE

This is to certify that

## **POWERSEM Gesellschaft für Halbleiterbauelemente und Elektronik mbH**

Walpersdorferstraße 53  
91126 Schwabach  
Germany

has implemented and maintains a **Quality Management System**.

### Scope:

Development, Production and Distribution of Power Semiconductor Modules like Diode-Modules, Thyristor-Modules, IGBT-Modules, MOSFET-Modules, SiC-Modules and Solid-State-Relays. Development, Production and Distribution of Power Semiconductor Components in discrete and transfer-moulded design.

Through an audit, documented in a report, it was verified that the management system fulfills the requirements of the following standard:

## **ISO 9001 : 2015**

Certificate registration no.	209348 QM15
Valid from	2018-07-18
Valid until	2021-07-17
Date of certification	2018-07-18

### **DQS GmbH**

Stefan Heinloth  
Managing Director
